

Customer Engineer

Google Interview Sales Presentation Prompt

Congratulations! We're excited you've reached the Presentation stage of the Customer Engineering interview process. The content below provides background information, instructions, assessment details and best practices for your presentation. For questions regarding your interview schedule, please contact your Recruiter.

Background

The **Google Cloud Customer Engineer** role comes with many responsibilities, including delivering persuasive technical sales presentations that lead to positive business outcomes. In this interview, you'll be assessed on your ability to deliver a sales presentation of your choosing to two Googlers - a hiring manager and a peer Customer Engineer.

Assessment

The purpose of this part of the interview process is to assess your ability in the following areas:

- Meeting mechanics
- Engaging with your audience
- Designing and selling a technical solution
- Conveying business value of solution
- Effectively handling questions

The Prompt

The key focus of this interview should be on the **value** of the solution that you're presenting and how this would **influence** a business stakeholder and an IT decision maker, who will be played by the two interviewers on the panel.

The Presentation should be a "role play" pitch, where your two interviewers will act as either a business or IT stakeholder of your choice. (You identify one of each.) Please present as if you were in front of a customer that you are trying to *win over or close*. **Think of this scenario as if you've already met with a client and done your discovery, and now you're coming back at the end of the sales cycle to meet with the final decision makers.** You can state assumptions about how much your audience knows about your solution and you should outline a clear objective at the start of your presentation.

Please prepare a 7 slide presentation on a technical solution you've proposed or implemented to solve a business problem in your current or previous roles. We encourage you to consider selecting a solution you've previously worked on, but if you don't have experience to draw from or prefer not to use past work, you may present a hypothetical solution based on common architectural pattern or reference architecture.

Your presentation should have the following layout and number of slides. Please note this is a framework for success. We strongly encourage you to follow this format.

1. Title slide, introductions, agenda and presentation background
2. The business problem you're solving
3. Measurable Value of Solution
 - a. to Business Stakeholder
 - b. to IT Decision Maker
4. Solution architecture
5. High-level implementation plan
6. Summary & wrap up

For those opting to use a hypothetical solution, visit [this site](#) for reference architectures.

Presentation Logistics

The presentation interview will be **45 minutes**. Your presentation should not exceed **30 minutes**, allowing time for Q&A.

Important: Be sure not to include confidential information in your presentation; including the name of the customer example being used. Avoid using logos, screenshots or imagery that could breach confidentiality. Please make the best decision based on your current workplace agreements.

- You're welcome to use any presentation software (including but not limited to: Slides PPT, Adobe, Prezi, Keynote). Please note that certain software may take over your entire presentation window. Be sure to practice presenting via [Google Meet](#) before your interview.
- Be prepared to open by informing your interviewers on who your intended business stakeholder and IT decision makers are (ex: Chief Product Officer, IT Director, COO, CEO, etc.) as well as high-level drivers toward the overall business objective. Remember, your interviewers will be acting as Business & IT professionals.
- Practice your presentation without your notes. You may use notes during your presentation, but know that if you share your screen, the interviewers will be able to see them.
- Regardless of which technologies you use in your presentation, focus on business value and reusable patterns. You're welcome to use any public cloud provider architecture for your presentation.

Best Practices

- Build your presentation with simplicity and intention. The panel will assess verbal communication and presentation content and structure.
- The topic selection should not be too broad yet remain at a strategic level with both business and technical stakeholder interests addressed. For example, a presentation on "Why Cloud" would be too broad. Choose a specific scenario that applies to both a business and technical challenge.

- We want this to be fun, not burdensome! The presentation should approximately take no more than four hours to prepare.
- Anticipate and prepare for questions you might be asked during and after you finish.
- Practice! Your delivery should be conversational but professional. Let your Recruiter know if you have any questions about your presentation format.
